

Data management and protection

Kingdom of Saudi Arabia | August 2026

Data is an increasingly strategic asset. Effective data management makes business processes more efficient, supports decision-making and improves business value, transforming data into trusted information. By complying with the National Data Management Office's (NDMO's) data management and personal data protection standards (DMPDPs), key decision makers at Saudi businesses strengthen accountability, privacy and data governance.

Our Approach

Data Domains

The 15 data domains covered by the standards are:

- Data Governance
- Data Catalog and Metadata
- Data Quality
- Data Operations
- Document and Content Management
- Data Architecture and Modelling
- Reference and Master Data Management
- Business Intelligence and Analytics
- Data Sharing and Interoperability
- Data Value Realisation
- Open Data
- Freedom of Information
- Data Classification
- Data Security (Covered by NCA)
- Personal Data Protection

From data challenges to data confidence

Talk to our market-leading data management team to understand how we can help you build a structured data management environment that increases confidence in data, improves regulatory alignment, strengthens governance and leads to sustainable business value.
